Product-related or management system-related certifications:

ISO 9001 – Quality management systems

ISO 14001 – Environmental Management Systems

AS 4801 Health and Safety

Name and location of production site: Zenith Interiors, Manukau, Auckland, New Zealand.

Rumba workstation (R2CJ)

Rumba employs a clean, simple design language, creating a strong, bold style, further underlined by its firmly grounded stance. Rumba workstation showcases exceptional stability, rigidity, and strength without compromising on visual resolution. With a high focus on enhancing the end user's feeling of wellbeing.

UN CPC code: 3812/3813/3814 (EPD International, 2019).

Geographical scope: Final product produced in Manukau, Auckland for the New Zealand market.

LCA Information

Functional unit / declared unit: 1 R2CJ workstation with four variations in the product; tabletop dimensions: 1.8 m * 0.8 m * 0.025 m; adjustable leg height: 0.61 m to 1.23 m (sit to stand).

Scope: Cradle to grave life cycle of one Rumba workstation

Reference service life: 15 years (EPD International, 2019)

Databases and LCA software used: AusLCI 2.2, ecoinvent 3.6, Industry Data 2.0 databases; SimaPro 9.1.0.11 software

Data collection period: July 2019 – February 2020

An Environmental Product Declaration, or EPD, is a standardised and verified way of quantifying the environmental impacts of a product that is based on a consistent set of rules known as Product Category Rules (PCR). EPDs within the same product category from different programs may not be comparable. This EPD is for a specific furniture product and follows the Product Category Rules 'Furniture, except seats and mattresses v2.01'.

Product Information

The Rumba workstation consists of three parts: a 25 mm tabletop, electric adjust legs and a beam which connects the legs and the tabletop. The legs have a height range of 610 to 900 mm (sit to sit) and 620 to 1230 mm (sit to stand). The worktops are made of particle board or medium density fibreboard, while the legs come with or without a steel bracket. All four options are analysed in this EPD: particle board / medium density fibreboard; with / without bracket.

All the components required for the legs are transported from Shanghai, China via sea freight, and so are the aluminium and steel sheet components required for the middle beam. The rest of the components are sourced from within Australia.

Background Data

Australian inputs were primarily modelled with the AusLCI database; the ecoinvent v3 database was used where suppliers were from overseas. All background data used was less than ten years old.

System Boundaries and Life Cycle Stages

Life Cycle Stages

This Environmental Product Declaration analyses the production of a Rumba workstation, including the raw material extraction, the manufacture of components from suppliers, the assembly of the workstation as well as the end of its service life. The different Rumba components are transported to Sandringham, Victoria where metal components are being powder coated and the workstation is assembled. The product is then packed in cardboard boxes and supplied to showrooms as well as clients in Australia.

Electricity use is required for the adjustable legs. Product testing quantifies a performance life of 15 years. Maintenance of the product involves cleaning and dusting.

System Diagram

An ‘upstream – core – downstream’ flow is adopted in this study. The upstream processes include the flows of raw materials. The core processes include all activities which the manufacturing organisation is in control of, i.e.

transportation of the components to the manufacturing factory and the actual process of manufacturing. The downstream processes include the steps that are controlled by the user and the disposal or recycling options of the products.

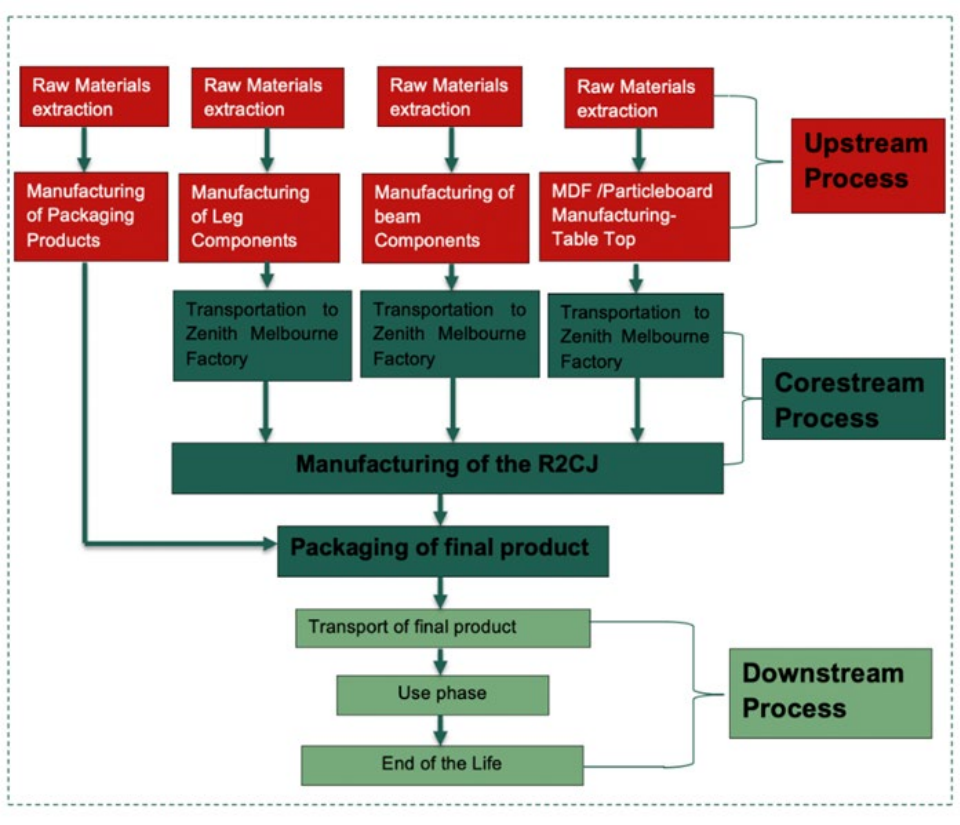

Figure 1: Process diagram Rumba workstation

End-of-life Scenarios

Zenith Interiors operates a take-back scheme for its furniture. Likewise, furniture owners resell or donate the furniture by themselves to extend its lifetime. In the end-of life for other environmental stages (represented as modules D), all aluminium and steel parts of the product are recycled after being manually dismantled. This is noted separately due to Polluter pays principle (PPP).

Data Quality, Temporal Scope and Geographical Scope

The modelling of Zenith products is of high quality as detailed company specific data about the product components, component suppliers, the annual energy consumption and the annual production rate was provided for this study. Data for upstream and downstream processes are retrieved from suitable averages in the AusLCI and ecoinvent databases.

The temporal scope of the study is the period for which the data was collected. The data collection process started with the visit to Zenith's Melbourne factory in July 2019. The energy consumption data taken into consideration range from September 2018 to 2019. The production volume data is for 2019. For the background data, temporal scope for AUSLCI V1.33, a shadow database of modified ecoinvent 2.2 processes is July 2020. For ecoinvent 3.6 the temporal scope is September 2019.

Table 2: Data sources, geographical scope and data quality

Materials/fuels		**Module**	**Data source**	**Geographical scope**	**Data quality**
Raw materials supply, components / raw materials manufacture, packaging	Components for beam	A1, A2	Information provided by Zenith Interiors	China	High quality
	Components for legs			China	
	Particle board/ Medium Density Fibreboard for tabletop			New Zealand	
	Packaging of final product				
	Packaging from suppliers				
Components transport to Zenith factory, manufacturing of final products	Transportation of steel/ aluminum components for beam (Shanghai, China & Auckland, New Zealand)	A3, A4	Information provided by Zenith Interiors	New Zealand	High quality
	Transportation of components for legs (Shanghai, China)				
	Transportation of Medium Density fibreboard/ particle board for tabletop (Auckland, New Zealand)				
	Electricity consumption				
	Natural gas consumption				
Transportation of final product	Zenith Auckland factory to client	B1	Assumption of average distance of 1,000 km according to Product Category Rules	New Zealand	Medium quality
Usage stage	Maintenance	B2	Regular cleaning and dusting and motor replacement are recommended.	New Zealand	Medium quality
	Replacement	B3	Motor life span: 5 years		

	Operational energy use	B4	Electricity to operate adjustable leg motor and stand-by energy are considered.		
End-of-life without recycling	Transport	C1	Assumption of average distance of 1,000 km	New Zealand	Medium quality
	Manual dismantling	C2	No impacts observed for manual dismantling		
	Waste disposal	C3	Complete product along with packaging ends up in landfill.		
Other Life Cycle stages	Recycling	D	100% of aluminium and steel parts are recycled.	New Zealand	Medium quality

Allocations

No allocation between co-products in the core module was necessary as there were no co-products created during manufacturing.

The methodological choices for allocation for reuse, recycling and recovery have been set according to the polluter pays principle (PPP). This means that the generator of the waste shall carry the full environmental impact until the point in the product's life cycle at which the waste is transported to a scrapyard or the gate of a waste processing plant (collection site). The subsequent user of the waste shall carry the environmental impact from the processing and refinement of the waste, but not the environmental impact caused in the earlier life cycles. The cut-off system model from ecoinvent was used. Any allocations in the AusLCI unit system and Industry Data 2.0 were adopted.
