

# GENE Chair

## Features:

The Gene Chair is a sustainable seating solution crafted entirely from 100% recycled polypropylene, sourced from pre-consumer waste by-products. Every component is fully recyclable, ensuring an environmentally conscious product lifecycle. Its thoughtfully designed construction allows for easy disassembly, making it simple to recycle each material type.

Featuring a perforated seat core with expanding slits, the Gene Chair offers lightweight comfort without compromising durability. The flat top edge of the backrest enhances functionality, providing a convenient grip for easy handling while maintaining a sleek and modern design.

Stacking 15 high on the floor & 40 high on the dolly.

**Design:** TAKU KUMAZAWA for AXONA AICHI
